

# The legal framework for once-only in Europe: where do we go from here?

Hans Graux, Timelex  
Final Event, April 12, 2023 (online)

DE4A has received funding from the European Union's Horizon 2020 research and innovation programme under GA. No. 870635

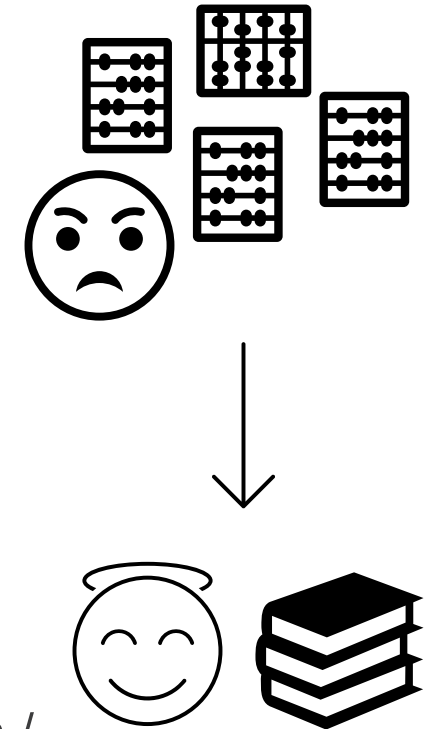

# The legal framework for once-only in Europe

- What does a once-only information exchange imply from a legal perspective?
- What does the current legal framework at the EU level fix? And what doesn't it fix?
- How did DE4A help, and where should we go now?

# Once-only in general – legal requirements

- Central idea: don't bother the user needlessly.
  - Why? To enhance quality, efficiency, user friendliness, proactiveness, prevent fraud, ...
  - But: balance with the fundamental rights to data protection, privacy and good administration
- How to implement this in legislation:
  - Obligation for public administrations to exchange information
  - Coupled with a framework of safeguards, with a broad menu of options:
    - Consent/request, authorisations, transparency, closed list of procedures / administrations / information, or procedural requirements.

# Once only in national legislations

- National legislation is usually quite ‘light’ in terms of safeguards
  - Usually procedural requirements and/or authorisations
  - No systematic reliance on closed lists or prior requests
  - Often linked to authentic sources
- Why? At the national level, there is familiarity, trust, and a shared pool of known resources – ‘soft’ assurances, backed up by law

# What about the EU?

- There is inevitably much less familiarity, trust, or a shared pool of known resources
- To compensate: stronger safeguards!
- SDGR:
  - Explicit request / possibility to preview (in principle)
  - Closed list of procedures
  - Infrastructural limitations

# What does the SDGR fix?

- It works!
  - Strong safeguards and focus on user control
  - Great for technologically and administratively capable users, who are honest and act in good faith, and understand the procedures and requirements
  - A fantastic leap forward, and a great first step
- But there are challenges too:
  - What about proactiveness? What about fraud detection? What about procedures that aren't on the closed list?
  - The growth options are quite limited

# Can we move to better once-only?

- There is a need for a broader once-only framework in the future
  - Exchanges based on certain public interests, or to proactively protect citizens
  - Alternative exchange patterns
  - Additional procedures
- DE4A built a lot of this already
- Would require a revision of the safeguards, but the menu of options exists: transparency, authorisations, appeals, ...

# Why stop at once-only?

- Horizontal framework for eGovernment at the EU level
  - Building on the data spaces notion
  - Incorporating once-only, but with an open perspective on:
    - Onboarding new procedures, evidences and semantics (including powers / mandates)
    - Defining safeguards for exchanges (request, public interest, and proactive)
    - Including complaints and remediation mechanisms
- Integrating with existing building blocks, including SDGR, eIDAS, Interoperable Europe Act, Data Governance Act, GDPR

# No complaints, just looking ahead!

- The SDGR was a great first step
  - Looked at the right problems
  - Provided a critical perspective on infrastructure
  - Solves a lot of problems
- But the work is not yet done
  - Legal recasting is needed for a truly open, proactive and trustworthy digital government ecosystem at the EU level
  - The legal framework should address governance and operational issues
  - DE4A can be a guide on the road

# Thank you for your attention

## Any questions?
